

Hands-on: Creating IIIF 3D Manifests

3D-Workshop at IIIF 2026 Annual Conference

1) Select one or more 3D model(s)

Take your own 3D model in .glb or .gltf format or choose one of the models in the following GitHub repositories:

- <https://github.com/IIIF/3d/tree/main/assets>
- <https://github.com/gautschr/3D-modelling/tree/main/assets>

2) Load one or more models into one of the IIIF 3D Manifest Editors (or try both!):

- <https://iiif.lfod.top/main/voyager-story-dev.html>
- <https://wilson0554.github.io/ManifestEditor/#/>
- Load e.g.
<https://raw.githubusercontent.com/IIIF/3d/main/assets/astronaut/astronaut.glb>

3) Add your metadata (title, attribution, copyright, ...)

4) Try to add lighting, cameras, and annotations

5) When you are satisfied with how everything looks in the viewer, then export the IIIF manifest of your 3D model

6) To publish the IIIF manifest you may upload it to this GitHub folder:

- <https://github.com/gautschr/3D-modelling/tree/main/iiif-manifests/IIIF%203D%20Workshop%202026>
- Change the id of your manifest manually!

7) Validate your IIIF 3D manifest here: <https://presentation-validator.iiif.io/>

8) View your 3D model and all the metadata in one of the IIIF-compatible 3D viewers by simply adding the URL of your manifest at the end of the link:

- MorphoSource: <https://www.morphosource.org/uv/uv.html#?manifest=>
- Smithsonian Voyager: https://smithsonian.github.io/voyager-dev/iiif/iiif_demo?iiif-content=
- Universal Viewer: <https://uv-v4.netlify.app/#?manifest=>
- In Manifestival (Kompakkt Viewer and X_ITE Viewer available there as well):
<https://morphosource.github.io/manifestival/>

Useful Resources

Manifestival (test and view IIIF 3D in Multiple Viewers):
